

Project Idea: stitch out as an applique design. For this example, we used black backing fabric, black batting, black fabric for the top. And then we added a layer of mylar and then topped it all off with a piece of black lace.

We choose to couch the spider webs and outer motif. Note: we did divide the nodes and deleted a few segments of the design to eliminate the overstitching.

After the stitching and couching was done, we removed the project from the frame and cut away

the excess batting and backing around the bat.

Then we went one step further and put 18g wire on the back of the wings so that they are bendable!
